Sacramento, CA

SUMMARY

Computer Science student at UC Davis (Math minor) with hands-on experience in machine learning, full-stack web development, and systems design. Improved a stock-prediction model's accuracy by 50%, shipped a Django web app with secure authentication, and built an 8-bit CPU from logic gates.

EDUCATION

University of California, Davis *Davis, CA*

B.S. Computer Science, Minor in Mathematics | GPA: 3.40 *Expected June 2027*

Relevant Coursework: Data Structures & Algorithm Analysis, Operating Systems, Computer Networks, Computer Architecture, Probability & Statistics, Linear Algebra, Numerical Analysis, Quantum Computation

TECHNICAL SKILLS

Languages: Python, C++, JavaScript, HTML/CSS, SQL, TypeScript, React, and Node.js
Frameworks & Libraries: Django, PyTorch, scikit-learn, XGBoost, NumPy, SciPy, Pandas, Matplotlib, PyQt6, REST APIs
Tools: Git, GitHub, Docker, VS Code, Logisim

EXPERIENCE

AI Student Collective | Machine Learning Engineer Mar 2026 – May 2026
Python, XGBoost, scikit-learn, Matplotlib | Davis, CA

- Improved stock-movement classification accuracy by **50%** by engineering features, tuning XGBoost hyperparameters, and validating with cross-validation.
- Guided each model iteration, measured by accuracy and F1-score, by sourcing and preprocessing clean market datasets.
- Earned the **Best Execution** award at AISC by presenting model methodology and results to a panel of judges.
- Maintained team code quality on a collaborative project by using GitHub version control and structured code reviews.

PROJECTS

Movie Rating Web App | *Python, Django, SQL* Jan 2025

- Enabled users to search, rate, and review movies with concurrent multi-user support by building a full-stack Django application.
- Secured user accounts and sessions by implementing Django authentication with hashed password storage.
- Kept user, movies, and review data consistent and efficient to query by designing a normalized relational SQL schema.

Finance Tracker | *Python, PyQt6, Matplotlib, NewsAPI* Aug 2025 – Sep 2025

- Reduced data retrieval time by **40%** by integrating the NewsAPI REST API to fetch and display live financial headlines.
- Gave users real-time visibility into portfolio and spending trends by building an interactive PyQt6 desktop dashboard with embedded Matplotlib charts.

8-Bit CPU Design | *Logisim, Digital Logic* Nov 2025

- Designed and simulated a working 8-bit CPU that executes addition, subtraction, and unconditional jump instructions by building the ALU, program counter, instruction decoder, and register file from basic logic gates.
