danishveersingh21@gmail.com | github.com/Danishveer11 | Sacramento, CA

SUMMARY

I am a Computer Science student at the University of California, Davis, pursuing a Minor in Statistics. I possess practical experience in machine learning, full-stack web development, and systems programming. I have demonstrated the capacity to enhance model accuracy, deploy end-to-end applications, and design hardware based on fundamental principles.

EDUCATION

University of California, Davis

B.S. Computer Science | Minor: Statistics | GPA: 3.40

Davis, CA

Expected June 2027

Relevant Coursework: Data Structures & Algorithm Analysis, Computer Networks, Computer Architecture, Probability & Statistics, Linear Algebra, Intro to Quantum Computation

TECHNICAL SKILLS

Languages: Python, C++, JavaScript, HTML/CSS, SQL,

Frameworks & Libraries: Django, PyQt6, PyTorch, scikit-learn, NumPy, SciPy, Pandas, Matplotlib, REST APIs

Tools: Git, GitHub, VS Code, Logisim

EXPERIENCE

AI Student Collective | Python, Matplotlib, scikit-learn

March 2026 – May 2026

Machine Learning Engineer – Project Member

Davis, CA

- Engineered an AI-driven stock movement predictor in a collaborative team environment, using GitHub for version control, code reviews, and structured cross-team coordination.
- Tuned and optimized XGBoost models for stock movement classification, iterating on model architecture and hyperparameter selection to maximize predictive performance.
- Boosted model accuracy by **50%** through systematic feature engineering and cross-validation techniques, substantially improving prediction reliability.
- Sourced and preprocessed clean datasets; evaluated model quality using accuracy and F1-score metrics to guide iterative model improvements.
- Presented technical findings and model results to a panel of judges through structured presentations, clearly communicating complex ML concepts.

PROJECTS

Movie Rating Web App | Python, Django, SQL

Jan 2025

- Built a full-stack web application enabling users to search, rate, and review movies with support for concurrent multi-user workflows.
- Implemented Django user authentication with secure password hashing, managing credential storage, and session lifecycle.
- Designed a normalized relational database schema in SQL to efficiently store user profiles, movie records, and reviews.

Finance Tracker | Python, PyQt6, Matplotlib, NewsAPI

Aug 2025 – Sept 2025

- Designed and built a desktop financial dashboard featuring an interactive PyQt6 UI with real-time data visualization.
- Integrated the NewsAPI REST API to fetch and display live financial headlines, reducing data retrieval time complexity by **40%**.
- Visualized portfolio and spending trends using Matplotlib charts embedded directly in the application window.

8-Bit CPU Design | Logisim, Digital Logic

Nov 2025

- Designed and simulated a complete 8-bit CPU in Logisim supporting addition, subtraction, and unconditional jump instructions.
- Constructed ALU, program counter, instruction decoder, and register file components from fundamental logic gates, gaining a deep understanding of the fetch-decode-execute cycle.
